SOLAR HOT WATER Energy from the Sun is free

Collecting solar energy from our sun is one of the most environmentally friendly ways to produce clean electricity and heat your water. There has never been a better time to go solar!

Save on energy bills

According to the Australian Government a solar hot water system will save a household \$300-\$700 a year off their electricity bills.

Help fight climate change

Switch to a solar hot water system and reduce greenhouse gas emissions. This will cut a household's greenhouse gas emissions by up to 30 per cent.

Help the environment

Water heating is the largest single source of greenhouse gas emissions from the average Australian home (excluding the family car).

What are the benefits?

By choosing to install a solar hot water system or by replacing an existing solar electric system your upfront purchase costs can be reduced.

Split systems have the tank on the ground and engineering approval for a roof mount tank is not necessary.

Government rebates, renewable energy certificates, and reduced electricity costs means that every household will be ahead over the life of the solar hot water system.

Dux Hot Water Systems really are the smart choice in water heating.
They are built to withstand the harshest conditions

Basic Solar Hot Water System Prices fully installed with a Grid Connect System

Electric Boost System Split system	Sale Price Including GST	RECS	Govt Rebate*	Purchase Price Offer** →	When installing a Grid Connect System
HWS2502 250L 2 Collectors	\$5,575	\$1,155	\$1,600	\$2,820	\$2,720
